LonRes Lettings Index

Prime London Q2 2023

Methodology

The index utilises the extensive LonRes database of over 600,000 private residential properties let across central, prime and the prime fringe areas of London.

LonRes has produced three separate indices, for houses, flats and 'all properties', all based on the mix-adjusted methodology. This method controls for the variation in the mix of properties let each quarter. It can therefore report changes in rental prices that are attributed to market movements rather than being influenced by the change in characteristics of properties let.

The LonRes lettings index is based on new tenancies being agreed and included on the LonRes database. It therefore does not include renewals. Exceptions are also made for properties at the very top and bottom of the price thresholds so that outliers do not have an unrepresentative skew on the results of the index.

There is no seasonal adjustment to the index.

Please note that in order to have a stable index we have used the whole of 2007 as the base period in this index. Previous publications used only 2007 Q1 as the base, giving them index values 100.0, whereas here the index start compares the 2007 average to each quarter starting in 2005.

Flats and all property

The prime London flats and 'all property' indexes are based on properties let over the previous quarter. The data series is weighted by granularity of properties let at a local level within each market area. For instance, if flats in Chelsea represent 10% of the total flats for the base period, a 10% weighting for the entire series has been maintained.

Houses

The private rental market of central London is dominated by apartments. House make up just 10% of lets across our entire catchment area. So, to produce a comprehensive house index requires a slightly different methodology. In this case, lets agreed over the previous 12 month period have been used (rather than the last three months). Therefore, the change reported in the most recent quarter compares the period in the year to the end of the stated quarter with the year to the end of the previous quarter/ same 12 months a year earlier.

The catchment areas have been carefully compiled to consider the different markets within prime London.

Prime Central London: SW1X, SW1W, SW3, SW10, SW7, W1K, W1J, W8, SW1A

Prime London: NW1, NW3, NW8, SW1P, SW1V, W1T, W1W, W2, W11, W14, W1H, W1U, W1G

Prime London Fringe: SE1, SE11, SW4, SW5, SW6, SW11, W4, W6, W9, W10

The LonRes Prime Index is transactions based therefore there may be changes to historic data with each quarterly release.

The LonRes Indices are provided for information purposes only. If you are reproducing or redistributing LonRes content you must include a source accreditation to LonRes.

LonRes indices may not be used for commercial purposes, including using the indices as a basis for any other data product or service.
