LonRes Yields Tables

Prime London Q4 2023

Methodology

The indices utilise the extensive LonRes database of over 122,000 unique private residential properties sold and 516,000 let since 2005.

The rental yields provided in this analysis are "Simple gross rental yields". These are calculated by dividing the average annual rental per sq. ft. in an area by the average value per sq. ft. of properties sold in the area, expressing the result as a percentage. The rental averages are derived from our Lettings Index, and the sales averages from our index of sales values. The yield does not take into account any capital appreciation, or depreciation, in the value of the property. Nor does the simple gross rental yield take into account any financing costs, taxation, voids or running costs, such as maintenance, insurance and management fees relating to the property.

LonRes has produced three separate indices, for houses, flats and 'all properties', all based on the mix-adjusted methodology. This method controls for the variation in the mix of properties let and sold each quarter. It can therefore report changes in rental and sales prices that are attributed to market movements rather than being influenced by the change in characteristics of properties let or sold.

The LonRes yields tables are based on new tenancies being agreed and included on the LonRes database. It therefore does not include rental renewals. Exceptions are also made for properties at the very top and bottom of the price thresholds so that outliers do not have an unrepresentative skew on the results of the tables.

There is no seasonal adjustment to the yields tables.

The prime London tables are based on properties let and sold over the previous quarter. The data series is weighted by granularity of properties let and sold at a local level within each market area. For instance, if flats in Chelsea represent 10% of the total flats for the base period (2012-2014), a 10% weighting for the entire series has been maintained.

The catchment areas have been carefully compiled to consider the different markets within prime London.

Prime Central London – SW1X, SW1W, SW3, SW10, SW7, W1K, W1J, W8, SW1A
